DISEASE: Defects in SCNIA are the cause of generative generative with febrile seizures plus type 2 (GEFS+2) [MIM:604233]. This autosomal dominant disorder is characterized by febrile seizures in children and afebrile seizures in adults. Penetrance is in children and a large intrafamilial variability of the phenotyp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient.

SUBCUNIT: The sodium channel consists of a large polypeptide and 2-3 smaller ones. This sequence represents a large polypeptide.

SUBCILIULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             is observed.

DISEASE: Defects in SCNIA are a cause of severe myoclonic epilepsy in infancy (SMEI) [MIM:607208], a severe form of generalized epilepsy with febrile seizures. SMEI is a rare disorder characterized by normal development before onset, seizures beginning in the first year of life in the form of generalized or unilateral febrile clonic seizures, secondary appearance of myoclonic seizures, and occasionally partial seizures. It is associated with ataxia, slowed psychomotor development, and mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and an characterized by a series of positively charged amino acids at

DISEASE: Defects in Scn8a are the cause of the jolting mutant (medjo), a mild form of motor endplate disease which is characterized by the absence of spontaneous, regular, simple discharges from Purkinje cells. After 3 weeks of age, jolting mic are unsteady and have wide-based gait and a rhythmical tremor of head and neck induced by attempted movement.

DISEASE: Defects in Scn8a are a cause of degenerating muscle cause of degenerating degenerating muscle cause of degenerating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          wrebellar Purkinje cells. It produces paralysis of hind limbs, severe musolethality.
SIMILARITY: Belongs to the sodium channel family. SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                           (dmu). Dmu is an autosomal recessive neuromuscular disorder tis characterized by skeletal and cardiac muscle degeneration. produces early onset progressive loss of mobility of the hind limbs and subsequent lethality in the first month of life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            characterized by lack of signal transmission at the neuromuscular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arborization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   early onset

                         Jeong S.-Y., Goto J., Kanazawa I.;
"Cloning of cDNA for human voltage-gated sodium channel a SCNBA.";
Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Mediates the voltage-dependent sodium ion in the contract of the membranes. Assuming pended or closed color of excitable membranes. Assuming pendent the membranes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Plummer N.W., McBurney M.W., Meisler M.H.;
"Alternative splicing of the sodium channel SCNBA predicts a truncated
two-domain protein in fetal brain and non-neuronal cells.";

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IsoId=09UQDÛ-4; Sequence=VSP_050592, VSP_050593; DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,52,53,55,56) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and ar characterized by a series of positively charged amino acids at every third position.

SIMILARITY: Belongs to the sodium channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Name=2; Synonyms=5A;

Example 1; Fig 2; 96pp; English

The present invention describes cation channel polypeptides (I), termed CC INPIONCHO5 and INPIONCHO6. Also described: (1) a purified nucleic acid CC molecule (II), which: (a) encodes (I); or (b) hybridises under high CC comprising (II); (3) a host cell transformed with the vector; (4) a comprising (II); (3) a host cell transformed with the vector; (4) a specifically to, and which preferably inhibits the activity of (I) or the CC decreases the level of expression or activity of (I) or the tetrameric cation channel; (6) a compound that either increases or cation channel; (7) a method of diagnosing a disease in a patient; (8) a comprising (I) or (II); (10) a method of treating a disease in a patient; (10) a method of treating a disease in a patient; (11) a method of treating a disease in a patient; (12) a method for the identification of a compound that is compound; (11) a method of or the identification of a compound that is compound; (12) a method for the identification of a compound that is compound; (12) a method for the identification of a disease/disorder; (13) compound; (12) a method for the identification of a compound that is compound; (12) a method for the identification of a disease/disorder; (13) compound; (12) a method for the identification of a compound that is compound; (12) a method for the identification of a disease/disorder; (13) compound; (14) a transgeric or and a reagent useful for the detection of a binding reaction between the compound that is compound; (12) a method for the detection of a binding reaction channel, compound that is compound; (13) compound; (14) a transgeric or compound that is compound; (14) a transgeric or compound that is compound; (15) compound; (16) compound; (17) compound; (18) compound; (19) compound; cerebroprotective, vasotropic and contraceptive activities, used in vaccines. (I), (II), vectors, tetrameric cation char ligands, compounds, or compositions of the present invention tetrameric cation channels may be used

(I) is useful as a cation channel or a calcium channel. (I) or the tetrameric cation channel is useful as a sperm-specific CatSper channel. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO2003008574-A1.

Identifying predisposition to an ion channel dysfunction, such as periodic paralysis, cardiac arrhythmias, migraine, Alzheimer's disease, schizophrenia, anxiety and depression, by detecting encoding-gene events.

SEQ ID NO 140; 106pp; English.

The invention relates to a novel method for identifying a subject predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA derived from the subject has any of 134 nucleotide sequences. The method of the invention has nootropic, neuroprotective, inotropic, antipyretic, antiarrhythmic, antimigraine, antidepressant, antiparkinsonian,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ophthalmological activity. A polynucleotide of the invention acts as an cion channel agonist, or ion channel antagonist. The methods, isolated nucleic acids, polypeptides, antibody, selective agonist, antagonist or commoditator of an ion channel, cells and genetically modified non-human committed acids, polypeptides, antibody, selective agonist, antagonist or commoditator of an ion channel, cells and genetically modified non-human committed and the selection, so the selection and treatment of epilepsy and/or a committed periodic paralysis, myotoniss, malignant hyperthermia, antiety, compassion, phobic obsessive symptoms, neuropathic pain, inflammatory compassion, chronic/acute pain, Bartter's syndrome, polycystic kidney disease, congenital stationary night blindness and total colour compassion, congenital stationary night blindness and total colour compassion. The sequence attains patent is not represented in the present sequence data for this patent is not represented in the compassion, but was obtained in electronic format directly compassion, antipub/published_pat_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

or human polynuclectides or a polynuclectide which represents a fra derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host ce comprising the vector, a method for identifying a nuclectide sequen

fragment,

New composition comprising two or more isolated polypeptides, preparing a medicament for treating pain in an animal.

```

or human polynucleotides or derivative or allelic variat

invention discloses a composition comprising two or more isolated rate

des or a polynucleotide which represents a fravariation of the nucleic acid sequence. Also

fragment,

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

CC subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the CC compound that regulates the activity of one or more of the CC polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC specification, a method for identifying a compound useful in treating CC polypeptides or their antibodies. The polypeptides given in the CC specification, a method for identifying a compound useful in treating CC polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating CC injury (CCI) and spared nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (Chung), chronic constriction CC the specification) which is differentially expressed during pain. Note: specification, but was obtained in electronic form directly from WIPO at CC from wino int/mih/mihlished not seminance.
Sequence 1836 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal

Early detection of soft tissue sarcoma comprises determining expression

Example sarcoma.

ㅂ

NO 229; 210pp; English.

of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression in the first soft tissue samples where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     xxx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc predisposed to a disorder associated with ion channel dysfunction. The cc method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA cc derived from the subject has any of 134 nuclective sequences. The method cof the invention has nootropic, neuroprotective, inotropic, antipyretic, cantiarrhythmic, antimigraine, antidepressant, antiparkinsonian, cc antiarrhythmic, antipyretic, methodoxide, antipyretic, conditional activity. A polynucleotide of the invention acts as an condition channel agonist, or ion channel antagonist. The methods, isolated conditional, are useful for the diagnosis and treatment of epilepsy and/or a clist of an ion channel, cells and genetically modified non-human cc animal, are useful for the diagnosis and treatment of epilepsy and/or a clistance associated with ion channel dysfunction, such as hyper or hypocomy and the converted associated with ion channel dysfunction, such as hyper or hypocomy and the converted associated with ion channel dysfunction, such as hyper or hypocomy and the converted associated with ion channel dysfunction, such as hyper or hypocomy and the converted associated with ion channel dysfunction, such as hyper or hypocomy and the converted associated with ion channel dysfunction, such as hyper or hypocomy of disease, parkinson's disease, schizophrenia, hyperthermia, anxiety, consistent and converted associated with ion channel dysfunction, such as hyper of disease, convention. The sequence symptoms, neuropathic pain, inflammatory consist, anxiety, such as sequence associated in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                predisposed to a disorder associated with ion channel dysfunction. The CC channel subunits (ICS) has undergone a mutation event so that a cDNA CC of the invention has nootropic, neuroprotective, intropic, antipyretic, cc neuroleptic, tranquiliser, analgesic, nephrotropic, antiparkinsonian, cc ophthalmological activity. A polymucleotide of the invention acts as an uncleic acids, polypeptides, antibgoressant, antiparkinsonian, complete acids, polypeptides, antipycetive applicative and cc noucleic acids, polypeptides, antibgonist. The methods, isolated completed acids, polypeptides, antipoly, selective agonist, antagonist or animal, are useful for the diagnosis and treatment of epilepsy and/or a disorder associated with ion channel dysfunction, such as hyper or hypotogramal, are useful for the diagnosis and treatment of epilepsy and/or a disorder associated with ion channel dysfunction, such as hyper or hypotogramal, are useful for the diagnosis and treatment of epilepsy and/or a disorder associated with ion channel dysfunction, such as hyper or hypotograms, chronic/acute pain, bartier's episodic ataxia, migraine, Alzheimer's cd depression, phobic obsessive symptoms, meuropathic pain, inflammatory completed specification, but was obtained in electronic kidney disease, fine present sequence represents and total colour convention. The present sequence represents an utant protein of the convention, but was obtained in electronic format directly axis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
